

# Victor Ginelli

## Founder & Full-Stack Product Engineer

West Covina, CA | [victor@she.energy](mailto:victor@she.energy) | (626) 808-7834 | [victor.she.energy](https://victor.she.energy)

### SUMMARY

Founder and senior full-stack engineer with 8+ years building consumer payments, identity, blockchain, and community products across web, mobile, backend, data, infrastructure, and smart contracts. Hands-on product leader who has built teams of up to eight and taken complex systems from concept to production.

### EXPERIENCE

#### Senior Full Stack Engineer | Send

Jan 2023 - Aug 2026

- Led zero-to-one delivery of a passkey-secured virtual debit card spanning WebAuthn PRF-derived smart-wallet ownership, KYC, issuance, funding, 3DS authentication, lifecycle controls, provider webhooks, and durable workflows; took the product from architecture through launch.
- Architected a gaming-resistant activity scoring and token-distribution system that distributed 81M+ SEND by July 2026 - 27% of the community allocation and approximately \$1.46M at the published July reference price - using behavioral signals, eligibility rules, dynamic reward ceilings, and high-precision allocation.
- Architected a shared TypeScript application across Next.js web and Expo/React Native, helping move Send from a PWA to native apps, ship 15 public iOS releases in under eight months, and reach 1K+ Android downloads; identity experiences supported 70K+ passkeys and 20K registered Sendtags.
- Migrated core payment execution to fault-tolerant Temporal workflows coordinating ERC-4337 transactions, confirmation, reconciliation, retries, idempotency, activity updates, and notifications for a platform with \$53M+ in on-chain transfer volume.
- Expanded Send beyond peer-to-peer transfers with group payments, conversational sends, public activity, reactions, rich transaction details, and cross-platform notifications; built deterministic Storybook scenes to reproduce complex product states without live backends.

#### Founder & Technical Lead | Shenanigan Tech LLC

2018 - 2023

- Founded and bootstrapped a cryptocurrency startup; raised \$100K+ through community support, recruited and managed six recurring contributors and two contractors, and led product development across applications, smart contracts, infrastructure, and governance.
- Created PANTS, a community fundraising and token-reward mechanism that extended the company's operating runway by 12 months.
- Designed a decentralized governance and contribution system that rewarded stakeholders according to measurable participation.

#### Project Lead | BrightID Discord Bot

2020 - 2023

- Took an identity-verification bot from a weekend hackathon prototype to a production service that verified 11,000+ people in one year; migrated deployment from Heroku to Railway and operated a dedicated BrightID node.

#### Selected Open-Source Contributor | Ethereum & DAO Ecosystem

2018 - 2023

- Shipped React, Solidity, payment, and identity improvements across SourceCred, Honeyswap, BrightID, and Colony, spanning contributor rewards, exchange fixes, identity verification, and DAO payment logic.

### TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, SQL, Solidity, Bash/Shell
- **Web & Mobile:** React, React Native, Expo, Next.js, Tamagui, tRPC, Zod, TanStack Query
- **Systems & Data:** Node.js, Bun, Temporal, PostgreSQL, Supabase, Docker, Kubernetes, Tilt
- **Blockchain & Quality:** WebAuthn, passkeys, ERC-4337, Viem, Wagmi, Foundry, Jest, Playwright, Storybook, OpenTelemetry, PostHog

### RECOGNITION

- **Winner, Aragon Hack for Freedom Hackathon** - Built a decentralized application using Solidity, React, and Aragon OS.

### EDUCATION

Claremont McKenna College - Physics and Computer Science, 2018
