PROFILE

Founder and full-stack product engineer with 8+ years building payments, identity, mobile, and community products. Has led teams and taken complex systems from concept to production.

EXPERIENCE

Send

Senior full-stack engineer

Dec 2023 - Aug 2026

- Led a passkey-secured virtual debit card from architecture through launch, spanning wallet ownership, identity checks, issuance, funding, authentication, lifecycle controls, webhooks, and durable workflows.
- Designed activity scoring and token distribution that allocated 81M+ SEND, equal to 27% of the community allocation.
- Helped move Send from a PWA to native apps on a shared TypeScript foundation, supporting 15 iOS releases, 1K+ Android downloads, 70K+ passkeys, and 20K Sendtags.
- Moved payment execution to durable workflows for a platform with \$53M+ in onchain transfer volume, covering confirmation, reconciliation, retries, activity updates, and notifications.
- Shipped social payment features including group payments, conversational sends, public activity, reactions, transaction detail, and cross-platform notifications.

Shenanigan Tech LLC

Founder and technical lead

2018 - 2023

- Built an athlete and fan platform for creating and livestreaming challenges, direct support, fan communities, and collectibles.
- Created Drupp and \$PANTS, a cross-community rewards campaign that extended operating runway by 12 months.
- Paired Gitcoin fundraising with \$PRTCLE incentives, contributing to a \$100K+ community raise.
- Led six recurring contributors and two contractors, and designed public governance and contribution rewards around measurable participation.

BrightID Discord Bot

Project lead

2020 - 2023

- Took an identity-verification bot from hackathon prototype to a production service that verified 11,000+ people in one year.
- Migrated deployment from Heroku to Railway and operated a dedicated BrightID node.

Ethereum and DAO ecosystem

Selected open-source contributor

2018 - 2023

- Shipped React, Solidity, payment, and identity improvements across SourceCred, Honeyswap, BrightID, and Colony.

TECHNICAL RANGE

Languages - TypeScript, JavaScript, SQL, Solidity, Bash

Web and mobile - React, React Native, Expo, Next.js, Tamagui, tRPC, Zod, TanStack Query

Systems and data - Node.js, Bun, Temporal, PostgreSQL, Supabase, Docker, Kubernetes, Tilt

Blockchain and quality - WebAuthn, passkeys, ERC-4337, Viem, Wagmi, Foundry, Jest, Playwright, Storybook, OpenTelemetry, PostHog

RECOGNITION & EDUCATION

Winner, Aragon Hack for Freedom

Built NFT Request, a prototype for browsing DAO-held NFTs, making token-backed offers, and completing approved exchanges through Aragon governance.

Claremont McKenna College

Physics and Computer Science, 2018
